Second-year Bachelor's Student in Computer Science (Data Track)
University Institute of Technology of Reims

Executive Summary

Objective

- Provide a visual analytical overview of Brentford's playing style.
- Identify attacking tendencies, defensive structure and key player contributions.
- Use interpretable metrics commonly used in football analytics.

Data Sources

- Opta
- Visualizations produced using Tableau Public

Table of Contents

- 1 Attacking Analysis
- 2 Chance Creation
- 3 Defensive Analysis
- 4 Player Analysis
- 5 Pressing
- 6 Set Pieces
- 7 Conclusion

Attacking Analysis

Attacking Profile

Shot Volume vs Shot Quality

Brentford attacking profile compared to Premier League

Key Insight

Analysis

Compared to high-volume attacking teams such as Manchester United or Arsenal, Brentford adopts a more selective attacking approach, prioritising shot quality over quantity.

Finishing Efficiency

Goals vs Expected Goals

Brentford Finishing Efficiency vs Premier League

Key Insight

Analysis

Brentford scores slightly fewer goals than expected based on its expected goals (xG), suggesting that the team underperforms marginally in finishing despite generating a solid number of scoring opportunities.

Finishing

Conversion vs Shot Quality

Finishing: Conversion vs Shot Quality

Key Insight

Analysis

Brentford combines an above-average shot quality with a strong conversion rate, indicating that the team not only creates good scoring opportunities but is also relatively efficient at converting them into goals.

Open Play Contribution

Open Play xG Share

Open Play xG Share – Brentford vs PL Average

Key Insight

Analysis

Brentford generates slightly less of its expected goals from open play than the Premier League average, suggesting that the team relies marginally more on alternative attacking situations such as set pieces.

Set Pieces Contribution

Set Piece xG Share

Set Piece xG Share – Brentford vs PL Average

Key Insight

Analysis

Brentford generates a slightly higher proportion of its expected goals from set pieces than the Premier League average, indicating that set pieces represent an important component of the team's attacking strategy.

Chance Creation

Transition Threat

xG Generated from Fast Breaks

Transition Threat – Brentford Generates Twice the League Average

Key Insight

Analysis

Brentford generates more than twice the Premier League average share of expected goals from transition situations, highlighting the team's strong ability to exploit quick attacking phases after regaining possession.

Defensive Analysis

Defensive Shot Profile

Shots Conceded vs Shot Quality

Defensive Shot Profile – Brentford vs Premier League

Key Insight

Analysis

Brentford concedes a moderate number of shots compared to the league average but generally limits the quality of those attempts, suggesting a defensive structure capable of preventing opponents from creating high-quality chances.

Defensive Efficiency

Goals Conceded vs xGA

Defensive Efficiency – Goals Conceded vs Expected Goals Against

Key Insight

Analysis

Brentford concedes slightly more goals than expected based on its expected goals against (xGA), suggesting a small defensive underperformance despite allowing a relatively controlled number of chances.

Defensive Block

Shot Locations Conceded

Defensive Block Structure — Brentford vs Premier League

Key Insight

Analysis

Brentford tends to concede a slightly higher number of shots than the league average but limits the proportion of attempts taken inside the penalty area, suggesting a defensive structure that protects central dangerous zones while allowing lower-quality shots from distance.

Player Analysis

Key Attackers

Goals vs Expected Goals

Brentford Key Attackers – Goals vs Expected Goals

Key Insight

Analysis

Brentford's attacking output is largely driven by a few key players, with Igor Thiago notably outperforming his expected goals, indicating strong finishing efficiency, while other attackers such as Kevin Schade perform closer to or slightly below their expected scoring levels.

Player Shooting Profiles

Shot Volume vs Shot Quality

Brentford Players – Shot Volume vs Shot Quality

Key Insight

Analysis

Brentford's attacking production is largely driven by a few players, particularly Igor Thiago and Kevin Schade, who combine a high shot volume with above-average shot quality, highlighting their central role in the team's offensive threat.

Pressing Analysis

Pressing Structure

PPDA vs Pressing Height

Brentford Defensive Pressing Structure vs Premier League

Key Insight

Analysis

Brentford applies a moderately aggressive pressing approach, with a pressing intensity slightly higher than the league average while maintaining a relatively balanced defensive line height.

Set Pieces

Set Piece Impact

Premier League Comparison

Set Piece xG Share – Brentford vs Premier League

Team

Key Insight

Analysis

Brentford ranks slightly above the Premier League average in terms of expected goals generated from set pieces, indicating that dead-ball situations represent a meaningful but not dominant source of attacking production.

Conclusion

- Brentford displays a selective attacking profile focused on shot quality rather than shot volume.
- The team shows strong effectiveness in transition situations and relies meaningfully on set pieces.
- Defensively, Brentford limits shot quality reasonably well but shows slight underperformance relative to expected defensive metrics.
- A few key attackers like Igor Thiago drive most of the offensive production.
